

Main features

- Range of measurement: from 500 to 5.000 Kg
- Accuracy class: D (OIML R60)
- All stainless steel construction
- Corrosion resistant
- Insensitive to lateral loads
- Low profile
- Class of protection: IP66 (DIN 40050)

The principle of measurement of the SB series of load cells is the deformation caused by the shear generated by the applied load. They are compact load cells with an all stainless steel construction that are extremely rigid towards the measured load and lateral or transverse loads.

The SB series load cells are the ideal solution for industrial weighing applications such as storage silos, weighing platforms and dosing systems.

ELECTRICAL CONNECTIONS

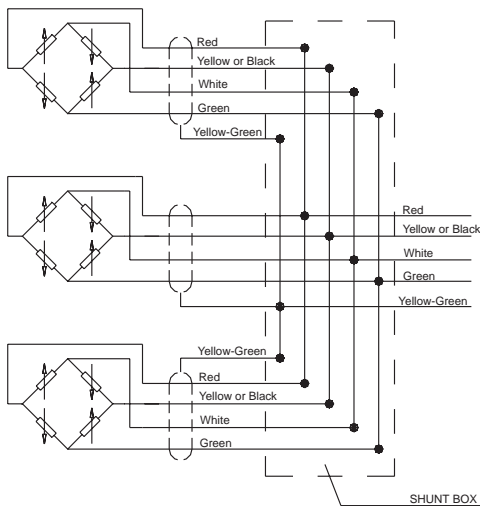

**4x0.25

* The screen is isolated from the transducer body. It is recommended that the ground is connected at the instrument end.

Cells connected in parallel

In systems that use several cells, the parallel connection automatically sums the loads on each individual cell.

Using this method of measurement, the maximum load will be the sum of the loads on the individual cells and the sensitivity will be the average value of these cells. It is important that the user ensures that no cell is stressed beyond its maximum rating under any load condition.
