INTRODUCTION

The SEM1620 is a DIN rail mounted temperature amplifier. It has been designed to accept most common process and temperature sensor inputs and provide the user with a three-wire voltage output signal. Isolation is provided between input and output and all temperature ranges are linear to temperature.

Designed for ease of use, our latest USB interface is fitted for quick and easy configuration. Just connect a standard USB cable between the SEM1620 and your PC, using our free configuration software. The SEM1620 does not need to be wired to a power supply during the configuration process, it is powered via the USB interface from your PC.

FEATURE HIGHLIGHTS

USER-TRIM The SEM1620 sensor has user-trim buttons on the front of the device. This allows for fine output adjustment at “zero” and “span” input points.

SENSOR BURN-OUT DETECTION If a sensor wire is broken or becomes disconnected, the SEM1620 output will automatically go to its user-defined level upscale or downscale and the LED illuminates.

STABILITY The SEM1620 DIN rail voltage transmitter incorporates the latest digital technology to ensure accurate, low-drift performance.

MULTIPLE OUTPUT RANGES With (0 to 1), (0 to 5), (0 to 10), (2 to 5) and (2 to 10) Voltage output ranges to choose from.

USB CONFIGURATION The SEM1620 is quick and easy to configure using a standard type USB lead and the free-of-charge software.

USB PC CONFIGURATION The SEM1620 is quick and easy to configure using a standard-type USB lead and the free-of-charge USBSpeedLink Windows software.

USB ANDROID VIEW The SEM16020 can be connected to an android phone or tablet using an OTG USB adaptor. Running a free App, the Android device can then be used to view live data from the SEM1620
